Clinical Registries to Schemas

Below is a list of diseases, clinical registries, and schemas to explore

Questions to discuss with Sanjay:

- Do we build a data dictionary per provider and per disease?
  - 1 per provider (start with this)
  - 1 per disease
- How do we handle multi sites with different schemas (e.g., Nimbus, Nimbus AZ)
  - For now, do it separately
- How do we build DD's for sales, data scientists, pharma customer, separately?
  - Page 1 → Summary. # of patients, # of years of data?
  - Page 2 → Tables
  - Page 3 → Columns and descriptions
  - Page 4 → Variables (config driven?)
- How can we automate the whole process (script points at schema, etc.)
  - Onkar to develop

Provider	Disease	Schema	Notes	Priority
Nira	MS (1 Site)	*ms_leaf_nira_registry*	First site we started with	Medium
Nira	MS (All Sites)	*nira__ms_cohort*		Medium
Nira	MG (All Sites)	*nira__ms_cohort*		Low
Nimbus	COPD	*nimbus__copd_curated*	Should this be combined with Nimbus AZ?	High
Nimbus	Asthma	*nimbus__asthma_curated*		High
Nimbus AZ	COPD	*nimbus_az__copd_cohor*	Abstracted variables (FEV1	High
