```
Hi, here is some feedback on the DD:

Summary
Can remove:
Headers -> "metric" and "value". These will be customer/ sales facing, so that is not relevant.
"variant" (what is the purpose of this?)
"Column count"
"status"
"git_sha"
"introspect version" (what is the purpose of this?)
"schema_snapshotdigest" (what is this?)

Tables
Can remove:
"Data Source", "Source Table"

Can we include a list of columns to populate the DD in in the config? For example, we don't need to populate
standard_profile_data_model and cohort_patients and dv_tokenized_profile_data. All the OMOP tables we can specify in config

Columns
Let's simplify this tab. For this one, we only need to speicify the column names, description, and field type. We can leave values,
distriution, etc. for the Variables tab.
So remove every column from Nullable to the right.

Variables
Can remove:
"Coding Schema" (what is this?)
"Implemented"
"Data Source"

```

Batch file | length: 1,420 lines: 36 | Ln: 36 Col: 124 Pos: 1,421 | Unix (LF) | UTF-8 | INS

What is the difference between "Completeness" and "% Patient"? This should really be the same column, where we display the % of patients with a value.
The "Criteria" column should be in config too, since these will be exact matches to the column. I think AI added an "ILIKE" to capture more, but this will be more strict. Take a look at the Tempus DD for an example.

Otherwise this looks really good Onkar!! Let's make these updates and update the code, and let me know when it can be done.
```

Batch file | length: 1,420 lines: 36 | Ln: 11 Col: 40 Pos: 322 | Unix (LF) | UTF-8 | INS
